Honorable Mention: Thank you to Harriet and Bob Rose, Paul Thomas, and Ron Abel for supporting the COPS Program throughout the 2017 year.

Respectfully Submitted
Chairperson of COPS
Craig Hamilton

Listening to the Rocks by Skipp Titus

As I look back on my life, I have always been drawn to rocks. They speak to me. Ok! Not in words, of course, but colors, shapes, & textures. They and their beginnings are amazing.

Being a child of Florida and having done very little travel until recently, I had NO idea the things they could say. We have sharks' teeth, broken shells and coral. Yes, occasionally you hear a pebble speak to you.

In our travels up the East Coast I wasn't listening. They were there. I just didn't know to listen. This year's travels took us through the central states and out West. It was amazing! I would step out of the RV and there they were....colors, shapes and textures like never before. Each place added a new sound for the symphony.

We dug for diamonds in Arkansas. Some places the sound was deafening...not in Arkansas. We listened everywhere we stopped.

In the beginning, we were just meandering with no place in particular to listen. The first directions we were given were in Minnesota. I mentioned rocks to a young lady who was a hound. She pointed out that the ground was covered in mossy agate. It was joyous! I listened in the cold and rain... the sounds were quite, but plentiful.

From there it was Google and places to stop. In Wisconsin there was "Pink Lady" stones talking everywhere in our campground. We met a family of 7 children. They were excited about the rocks. Their mom says they spent the rest of the trip hounding.

Another place full of sound was Lake Michigan. Deer Lick Park borders the lake. It was a place of many colors, shapes and textures. When we returned to the RV and I was washing my find a gentleman came over to look. He and his wife have been hounding for years. They identified some and told us where else to look.

Ohio gave us Lake Erie, but not very many talkers. It seems we found the ear bones of fish.

Seneca Lake in New York was a surprise. I contacted the local club and they said hounding was minimal in a couple of places. Surprise! While out looking for white deer we stopped by the lake. The rock chorus was in tune.

Since we were in NY State we stopped in Herkimer. Ace of Diamonds is fun and gives you a chance to hear the crystals sing. We spent 3 hot days sluicing. It was our kind of fun.

Our next rock spot was North Carolina. Finding a place to actually, dig was hard. We ended up at a place where they salt the dirt and you sluice it. It was fun and the rocks were nice. Best yet was our next campground, as I was cleaning the fire ring I heard the two most beautiful specimens speak to me. It was an incredible find.

Our trip to Franklin was rained out. There is always next year. We returned home with close to 100 pounds of rock.

Jason Hamilton's Acrylic Inlay Sea Shells Class

Timothy Smeggil's Mason Jar Chainmaille Class

The Jacksonville Gem and Mineral Society of Jacksonville, Florida is a non-profit 501 (c)3 organization. It was created to stimulate interests in rocks and minerals by furtherance of the activities of its members, in the earth sciences; to disseminate knowledge, methods and procedures for the collection, identification, classification, cutting, polishing, setting, and mounting of specimens for these activities; and to promote good fellowship, proper ethics and conduct in the relationships of said members with each other and with members of other earth science societies in the pursuit of these activities.
